

IrisMet

63% viscose, 37% metallized thread

IrisMet - special metallized threads for machine embroidery. They are perfectly suited for embroidery of emblems and liturgical dresses. They are ideal for embroidery on clothing and household textiles. Threads IrisMet can be used for creating tatting jewelry and all kinds of needlework. High quality of threads makes embroidery very esthetic.

Threads

IrisMet 40N is for making emblems on:

- clothing (blouses, hats, scarves)
- liturgical dresses
- household textiles

Threads IrisMet are recommended for all kinds of industrial, half-industrial and household embroidery machines.

On account of raw materials (63% viscose, 37% metallized thread) threads of this type are relatively stiff and this is thread's natural characteristic. We recommend to use protective net to avoid a falling of the threads.

Due to Oeko-Tex Standard 100 – product class II – threads IrisMet fulfil requirements for the safety of product and can be used for embroidery on apparel and accessories for children under 3.

Due to the specificity of the production of IrisMet threads, there may be differences in colour between production batches. We don't recommend you combine threads from different production batches.

Technical data:		Average linear mass of the threads	Minimum average tensile strength	Make - up	Recommended needle size
Article	Dtex x ply	dtex	cN	m	No.
IrisMet 40N	260 x 1	260	280	5 000, 1 000	80 - 90

Available colours shown in colour card of **Iris**.

IrisMet is supplied on King spools.
